

# INDUSTRIAL TECHNOLOGY AT TECH

- Train for a career in automation engineer, mechatronics technician, industrial maintenance mechanic and industrial production manager.
- Install, test and troubleshoot Programmable Logic Controllers (PLCs) and motor drives in an electrical control system.
- Perform, evaluate and interpret machine operations.
- Analyze and perform preventive and predictive maintenance on robotic and other automated industrial equipment.
- Solve complex engineering, design and technical problems.
- Gain hands-on training using industrial components and real-life problem-solving.

The program meets daily from 7:50 – 10:40 a.m. or 12:45 – 3:35 p.m. Adults who attend full-time can complete training in **one semester**. After completing training, graduates are prepared for industry-recognized certification testing.

**Space is limited. Call 405.377.3333 to enroll.**
